PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience bridging business and technology across AI-enabled digital transformation, KPI reporting, and cross-functional stakeholder management. Proven ability to gather and translate complex requirements into actionable business use cases, design Power BI dashboards, and drive process improvement and workflow optimization. Experienced facilitating Agile ceremonies, managing end-to-end stakeholder communication, and delivering data driven recommendations that improve operational efficiency and business performance.

PROFESSIONAL EXPERIENCE

CVS Health **Mar 2025 – Present**

Data Analyst

- Designed and maintained **Looker** and **Tableau** dashboards tracking 15+ KPIs across claims, payor analysis, and compliance reporting, enabling data-driven decisions for 50+ business and regulatory stakeholders across clinical and building domains.
- Developed and automated **SQL**-based reporting pipelines in **BigQuery** and **Snowflake**, transforming 3+ TB of healthcare data across claims, pharmacy, and clinical domains into clean, **analysis-ready datasets** for KPI tracking and executive reporting.
- Collaborated with cross-functional business stakeholders to define reporting requirements, align KPIs, apply row-level security for regulatory users, and deliver curated datasets supporting compliance and executive decision-making workflows.
- Performed **data validation**, quality analysis, and exploratory data analysis (EDA) using **Great Expectations** and **Dataplex Data Quality**, identifying and resolving data anomalies to ensure accuracy of clinical and BI reporting outputs.
- Monitored and supported 20+ scheduled **reporting automation** workflows orchestrated via **Apache Airflow**, ensuring SLA adherence and timely data delivery to downstream analytics consumers.
- Conducted ad-hoc analysis and responded to stakeholder data requests, translating complex data into clear insights and actionable recommendations for both technical and non-technical audiences.

Environment: *GCP (BigQuery, Dataplex, Data Catalog, Cloud Composer), Snowflake, SQL, Python, Looker, Tableau, Power BI, Great Expectations, Apache Airflow*

Meta **Aug 2024 – Feb 2025**

Data Analyst

- Analyzed billions of daily user interaction events (watch time, impressions, clicks, shares) to surface **engagement trends**, and regional behavioral patterns, delivering weekly insight reports consumed by 3+ Product and recommendation teams.
- Built and maintained **feature tables** and analytical datasets in **Delta Lake** on S3 using **Apache Spark** on EMR, supporting ad-hoc exploratory analysis and structured reporting for ML and product stakeholders.
- Developed **A/B testing** and **experimentation reporting** pipelines computing CTR, retention, and watch time metrics across 10M+ user cohorts in **Amazon Redshift**, enabling accurate and reproducible experiment analysis.
- Produced **time-decayed engagement metrics** and content recency scores across petabyte-scale behavioral datasets using **Python (Pandas, NumPy)**, supporting data-backed product decisions for ranking and recommendation systems.
- Aligned metrics across multiple analytics systems and resolved data discrepancies, and Standardizing KPI definitions across product and business teams reducing report inconsistency escalations by 25%.

Environment: *Apache Spark, AWS EMR, Amazon S3, Delta Lake, Amazon Redshift, Python (Pandas, NumPy), SQL, dbt*

Accenture **Feb 2021 – Jul 2023**

Data Analyst

- Built **SQL** and **Python** reporting pipelines using **AWS Glue** and **PySpark** to ingest and transform patient claims, EHR, and lab data across clinical operations and billing departments improving data readiness for analytics by **35%**.
- Reduced duplicate patient records by **40%** by implementing data cleansing and standardization routines using **Python (Pandas)** and SQL, improving accuracy of patient outcome tracking and risk stratification dashboards.
- Migrated 3+ TB of healthcare data from on-premise systems to **AWS Redshift**, applying partitioning and distribution strategies that improved query performance by **45%** for population health analytics teams.
- Automated batch **reporting workflows** using **Apache Airflow**, reducing job execution time by **28%** and ensuring timely delivery of clinical dashboards and payer reimbursement reports.
- Supported incident resolution for failed data loads using **AWS CloudWatch** and Airflow logging, reducing pipeline downtime by **30%** and improving reliability of time-sensitive reporting environments.
- Developed and maintained **Power BI** dashboards and Excel-based reporting templates for clinical operations teams; provided training and mentorship to colleagues on data structures, reporting standards, and tool adoption best practices.

Environment: *AWS Glue, AWS Redshift, AWS S3, AWS CloudWatch, PySpark, Apache Airflow, Python (Pandas), SQL, PostgreSQL, Power BI, Excel, Git, Docker, JIRA*

TECHNICAL SKILLS

Analytics & BI: SQL (Advanced), Power BI, Tableau, Looker, QlikView, Qlik Sense, GA4, Dashboard Design, KPI Development, Data Validation, Ad-hoc Reporting, Exploratory Data Analysis (EDA), Statistical Analysis, A/B Testing, Experiment Analysis, Stakeholder Presentations.

Programming & Data: Python (Pandas, NumPy, PySpark, Apache Beam), R, Bash, Scala, ETL Pipelines, Data Cleaning, Feature Engineering, Data Storytelling.

Cloud & Databases: GCP (BigQuery, Dataflow, Dataplex, Vertex AI), AWS (S3, Redshift, Glue, EMR, Athena), Snowflake, Databricks, Delta Lake, PostgreSQL, MySQL, MongoDB, Microsoft Fabric, Excel, Google Sheets.

Tools & Infrastructure: Apache Airflow, Apache Spark, Kafka, dbt, Power Automate, Power Query M, Git, Docker, Terraform, JIRA, Agile.

AI/ML & Experimentation: ML Concepts, Prompt Development, Vertex AI Workflows, Optimizely, A/B Experimentation Platforms, Predictive Analysis.

Security & Compliance: HIPAA, GDPR, IAM, RBAC, Data Masking, Encryption.

EDUCATION

Masters in Computer Engineering **Sep 2023 – May 2025**

University of Bridgeport, USA | GPA: 3.3/4.0
